ENGINEER PORTFOLIO & EXECUTIVE PRESENTATION · 2026

Reiky Aryanando Pratama

Junior Backend & Full-Stack Developer · REST APIs · Web & Mobile

Informatics graduate (GPA 3.81 / 4.00) with ~11 months internship experience as a Backend Developer at Badan Sistem Informasi Universitas Islam Indonesia. Focused on developing reliable, structured REST APIs with PHP, Laravel, and Lumen, database schema & ERD design, Postman testing, and AI-powered MCP services.

Beyond the Code: Systems, Craft & Precision

A blend of strong academic grounding, rigorous software engineering, and active production delivery.

ENGINEERING CORE

Building Practical & Reliable Software

I believe that good software starts with clear fundamentals, solid data integrity, and thoughtful design. My journey spans foundational engineering: from organizing normalized database schemas and clean REST APIs to building responsive client interfaces.

Through my internship at Badan Sistem Informasi UII and academic research, I stay curious, open to feedback, and dedicated to writing maintainable code that helps real users.

- **Reliability-First —** Normalized schemas, idempotent transactions, and defensive error boundaries.
- **Full-Stack Agility —** Seamless bridge between server-side Go/PHP and client-side TypeScript/ Flutter.
- **Academic Rigor —** GPA 3.81/4.00, published thesis research, and certified cloud practices.

CURRENT PRODUCTION ROLE · SINCE DEC 2025

Backend Developer Intern

Badan Sistem Informasi · Universitas Islam Indonesia

- Developing RESTful APIs with PHP, Laravel, & Lumen for university internal systems.
- Designing database schemas, ERDs, and running API test suites via Postman.
- Integrating backend with frontend (Angular) and collaborating via Git & GitLab.
- Implementing Model Context Protocol (MCP) & AI for automated summaries & chat.

ACADEMIC EXCELLENCE & PUBLISHED RESEARCH

Bachelor of Informatics (GPA 3.81 / 4.00)

Universitas Islam Indonesia · Class of 2026

- Published Researcher: Park Masjid thesis published in Technologia: Jurnal Ilmiah (2026).
- Award Winner: Best Team Award at Informatics Expo Design Thinking (2022).
- Certified: AWS re/Start, Dicoding Machine Learning & Clean Architecture, Cisco Cyber Threat.

What I Build With: A Focused Engineering Stack

Refined through production backend internships, academic research, and full-stack software delivery.

01

Backend & Systems

Backend services, RESTful API endpoints, and clean server-side application logic.

CORE COMPETENCIES

- PHP & Laravel
- Lumen Microservices
- Go (Golang)
- RESTful APIs
- gRPC & Protobuf
- MCP AI Protocol
- RBAC Security

02

Web & Interfaces

Interactive, accessible, and fast web applications with crisp design systems and zero layout thrash.

CORE COMPETENCIES

- TypeScript
- React & Next.js
- Vue.js 3 & Vite
- Tailwind CSS
- HTML5 / Modern CSS
- GSAP Animation
- Component Systems

03

Mobile Engineering

Native and cross-platform mobile apps with fluid animations, offline caches, and hardware integrations.

CORE COMPETENCIES

- Flutter & Dart
- Riverpod State Mgmt
- Kotlin (Android Native)
- Jetpack Compose
- React Native & Expo
- SQLite / AsyncStorage
- Hardware Sensors

04

Data & Infrastructure

Normalized data models, real-time database synchronizations, and containerized deployment pipelines.

CORE COMPETENCIES

- PostgreSQL
- MySQL Tuning
- Redis In-Memory Cache
- Firebase Firestore
- Docker Containers
- AWS Cloud Services
- Git CI/CD Workflows

OpsFlow: Enterprise Service Desk & Asset Control

Make internal IT work visible, assignable, and auditable from initial request to resolution.

SERVICE DESK / WEB PLATFORM

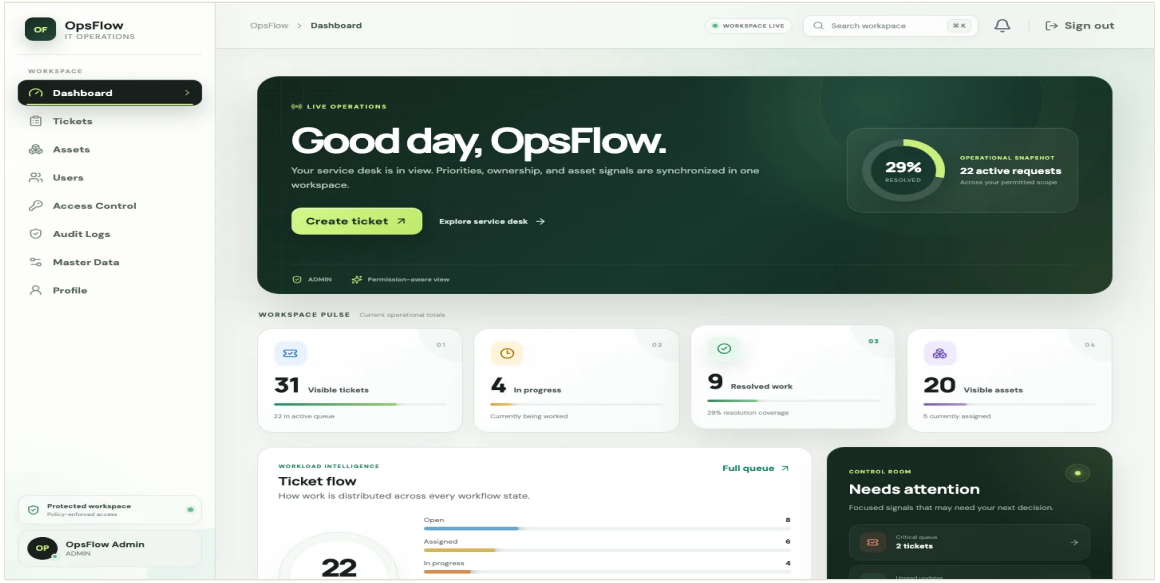

OpsFlow Platform

A full-featured internal operations and service desk platform built to eliminate lost tickets and opaque IT requests. Engineered with multi-role access controls, automated technician handoffs, audit histories, and asset allocation tracking.

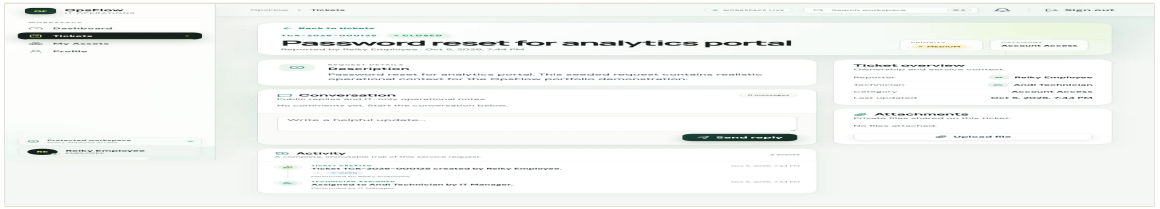

KEY ARCHITECTURAL HIGHLIGHTS

- **Role-Based Access Control:** Strict separation for Admins, Technicians, and Department Requesters.
- **Ticket Lifecycle & SLAs:** Real-time status transitions with automated escalation and notifications.
- **Asset Tracking & Audit Log:** Immutable operational history for hardware, licenses, and assignments.

TECH STACK: Laravel · React · TypeScript · PostgreSQL · Docker

OpsFlow Operations Dashboard: Real-time ticket queues, SLA metrics & status breakdown

Kizen: Manga & Comic Reader with Cloud Sync

A personal comic reader app built with Flutter, Riverpod, and multi-source cloud sync.

MOBILE & CLOUD / FLUTTER

Kizen Application

A cross-platform manga and comic reader application delivering a clean and lightweight reading experience. Engineered with Riverpod reactive state management, Tachiyomi-inspired library organization, and multi-source scraping architecture.

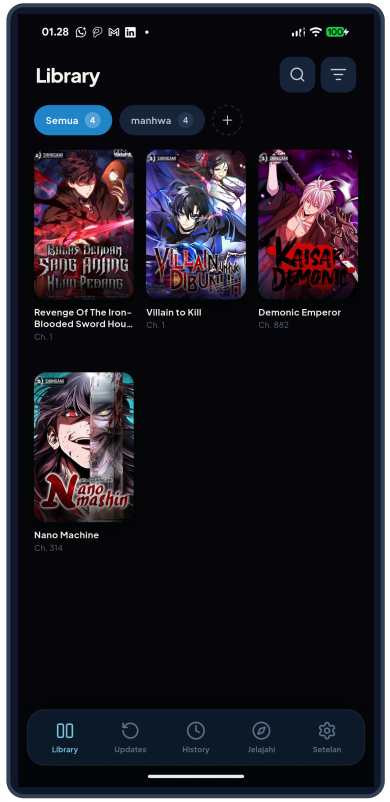

CORE CAPABILITIES & ENGINEERING

- **Multi-Source Scrapers:** Modular extension architecture for fetching chapters dynamically.
- **Cloud Sync & Progress:** Firebase Firestore syncing reading history across multiple devices.
- **Infinite Scroll Engine:** Preloaded image pipeline with zero stutter and memory-conscious caching.

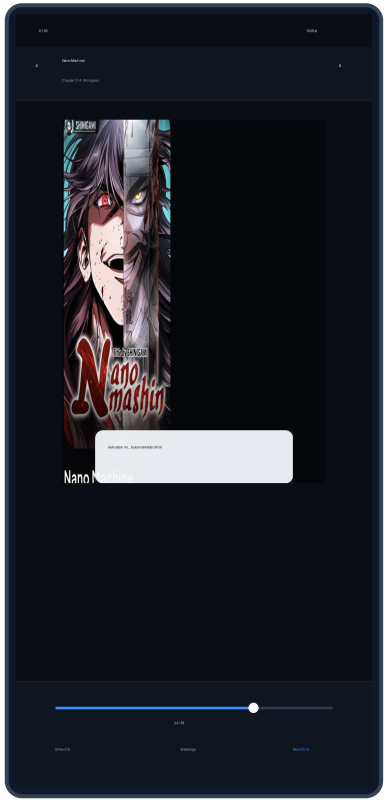

TECH STACK: Flutter · Dart · Riverpod · Firebase · Firestore

Cloud Sync Onboarding

Library & Collections

High-Res Infinite Reader

Park Masjid: IoT-Integrated Smart Mosque Parking

Hardware-integrated vehicle counter with realtime Firebase sync and prayer schedule automation.

UNDERGRADUATE THESIS RESEARCH

Park Masjid Platform

An Android and IoT thesis system engineered to eliminate parking congestion at major congregational mosques. Directly connects gate sensors to Firebase Realtime Database to broadcast live parking availability to thousands of worshippers.

Published as academic research in Technologia: Jurnal Ilmiah (2026).

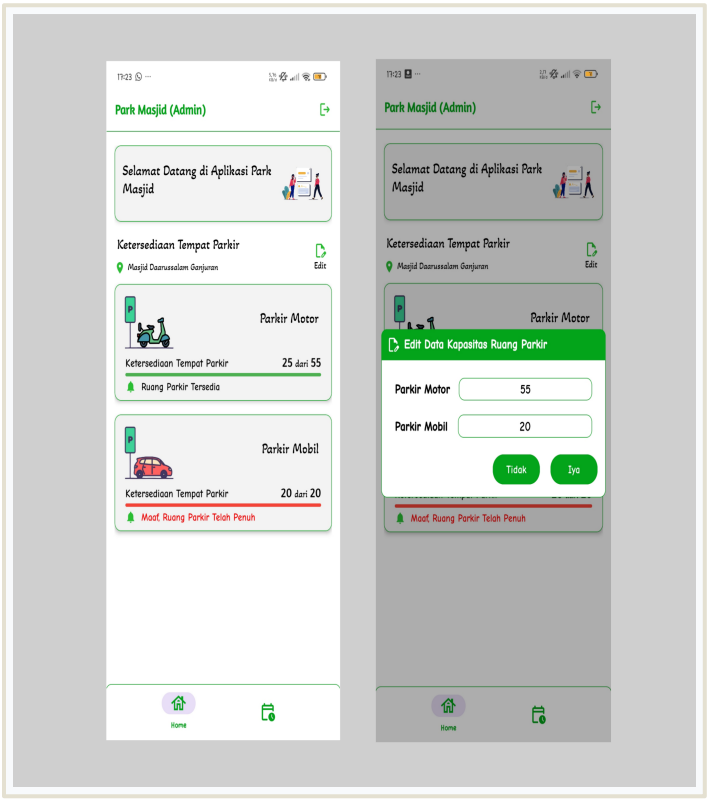

KEY INNOVATIONS & ACHIEVEMENTS

- **Live Vehicle Counters:** Realtime updates for motorcycle and car parking slots via IoT sensors.
- **Administrator Control:** Live capacity overrides, security controls, and prayer schedule editor.
- **Published Research:** Peer-reviewed academic paper verifying hardware-to-app latency.

TECH STACK: Kotlin · Android SDK · Firebase Realtime DB · IoT · Material 3

Visitor Live Slot Counter

Administrator Capacity & Schedule Editor

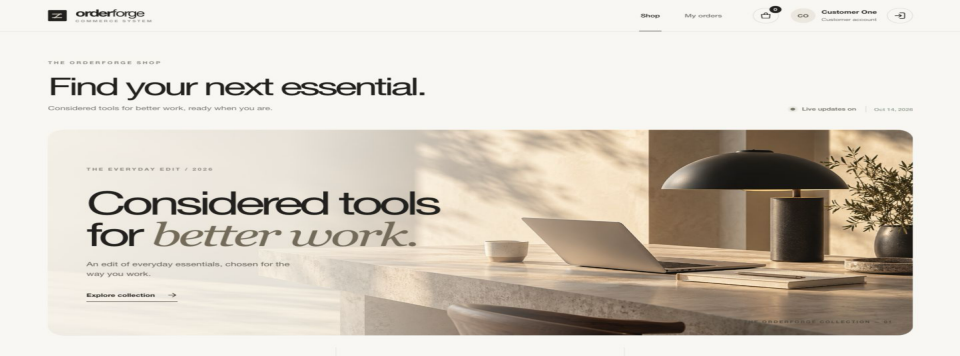

OrderForge & Native Android Architecture

Explorations in e-commerce checkout consistency and clean native mobile architecture.

COMMERCE & RELIABILITY

OrderForge Checkout Engine

An e-commerce order engine designed to explore data consistency during checkout surges with atomic Redis locks and idempotent payment processing.

- Atomic Redis reservation locks preventing overselling.
- Cryptographic webhook deduplication preventing double-charges.

TECH STACK: Laravel · Next.js · PostgreSQL · Docker · Redis

NATIVE ANDROID / OFFLINE-FIRST

Katalog Komik Android App

A modern native Android application showcasing Google Clean Architecture, declarative Jetpack Compose UI, and offline-first Room Database caching.

- 100% declarative Jetpack Compose UI with adaptive orientations.
- Reactive Single Source of Truth repository with Room DB & Coroutines.

TECH STACK: Kotlin · Jetpack Compose · Room DB · Retrofit · Coroutines

MoneyTrack: Offline-First Expense & Cash Flow Analytics

Know where every rupiah moves — zero cloud latency, multi-wallet accounts, and complete privacy.

MOBILE FINANCE & ANALYTICS

MoneyTrack Mobile App

A personal finance management application engineered for speed, privacy, and full offline functionality. Enables users to manage multiple bank accounts, e-wallets, and cash reserves with automated expense categorization and visual analytics.

CORE PRODUCT HIGHLIGHTS

- **100% Offline Storage:** Encrypted local device storage with zero server dependency or network delay.
- **Multi-Wallet Accounting:** Seamless inter-wallet transfers with atomic debit/credit transaction logging.
- **Dynamic Cash-Flow Charts:** Realtime visual breakdowns of monthly income, expenditures, and categories.

TECH STACK: React Native · Expo · TypeScript · AsyncStorage · Charts

Balance & Wallet Breakdown

Filterable Transaction Ledger

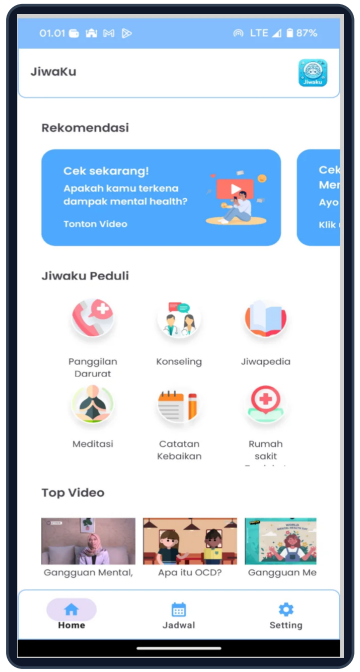

Also in the Making: Health Tech & Enterprise Deliveries

Additional explorations and production client deliverables from research and freelance projects.

HEALTH & WELLNESS · ANDROID

JiwaKu Mental Health App

A comprehensive mental wellness support app built with Kotlin, featuring real-time counseling chat, emergency psychiatric helpline routing, guided audio meditation, and Firebase Firestore authentication.

- Real-time counseling chat with Firestore listeners.
- Direct routing to certified psychiatric helplines.
- Built-in mood tracking journal and guided audio exercises.

TECH STACK: Kotlin · Android SDK · Firebase · Material 3

COMMERCE & WORKFLOW · FULLSTACK

Enterprise Client Web Portal

A custom full-stack web application developed to manage client invoicing, appointment scheduling, and automated PDF receipt generation with role-based access control and MySQL data integrity.

Delivered as a production freelance solution for a commercial service provider.

- Automated PDF invoice and receipt generation engine.
- Role-based authentication (Client, Staff, Administrator).
- Automated appointment calendar with SMS/Email notifications.
- Zero data discrepancy audit logs for financial reconciliation.

TECH STACK: Laravel · Vue.js 3 · Vite · MySQL · Tailwind CSS

Track Record of Impact & Milestones

Consistent trajectory across enterprise software engineering, academic excellence, and continuous growth.

PRODUCTION — DEC 2025 – PRESENT (~11 MOS)

Backend Developer Intern · Badan Sistem Informasi · Universitas Islam Indonesia

Developing RESTful APIs with PHP, Laravel, Lumen, designing database ERDs, API testing with Postman, Angular frontend integration, and MCP AI automated summaries.

GOVERNANCE — AUG 2024 – DEC 2024

Enterprise Architecture & Systems Intern · Badan Sistem Informasi · Universitas Islam Indonesia

Mapped enterprise business processes, maintained application catalog repositories, and evaluated service interdependencies across campus platforms.

CLOUD — MAY 2024 – AUG 2024

AWS re/Start Cloud Graduate · Amazon Web Services & Dicoding Indonesia

Completed intensive 400+ hours training covering AWS cloud architecture, VPC networking, IAM security, Linux systems, and automated deployment pipelines.

HONORS — 2021 – 2026

Bachelor of Informatics (GPA 3.81 / 4.00) · Universitas Islam Indonesia

Graduated with high honors. Authored published research on IoT smart parking in Technologia: Jurnal Ilmiah. Best Team Award at Informatics Expo.

Let’s connect & build together.

Looking for a backend or software developer? I focus on building reliable, well-structured, and maintainable systems that solve real user needs—eager to learn, contribute, and collaborate with an engineering team.
